

Professional Summary

- **Full Stack Developer with 3.3 years of experience**, specializing **Angular, ASP.NET Core (.NET 6+), Razor Pages, and MS SQL Server**, with a strong focus on building scalable, high-performance web applications.
- Expert in building dynamic and scalable **Angular (2+ to 20) applications using TypeScript, RxJS, with deep understanding of component-based architecture and modular design.**
- Strong expertise in developing **RESTful APIs using ASP.NET Core Web API, implementing Entity Framework Core, LINQ, and Dependency Injection** for clean, maintainable backend architecture.
- Advanced knowledge of Angular performance **optimization techniques such as OnPush Change Detection, Lazy Loading, Virtual Scrolling, and AOT compilation** to enhance application speed and scalability.
- Experience in designing secure and **efficient backend systems with authentication & authorization (JWT, CORS)** and optimized data handling using EF Core and LINQ queries.
- Experienced in developing scalable Angular applications with reusable components, API integrations, routing, lazy loading, and performance-focused UI development.
- Hands-on experience in developing **server-side rendered applications using ASP.NET Core Razor Pages**, implementing model binding, validation, and seamless integration with backend services.
- Experience using **AI-powered development tools** such as **GitHub Copilot, Cursor AI, and Claude AI for code generation, debugging, and productivity** enhancement, with strong ability to review and optimize AI-generated code for production use.
- Experience working with MS SQL Server, including writing queries, stored procedures, table relationships, and supporting backend data operations.
- 3 years of **experience in a product-based startup**, developing applications end-to-end, **which enhanced my ability to learn quickly and adapt to evolving technologies.**

Skill Set

Languages	: JavaScript, TypeScript, C#
Frontend Technologies	: Angular (2+), TypeScript, JavaScript (ES6+), HTML5, CSS3
Backend Technologies	: .Net 6+, ASP.NET Core Web API, Razor Pages, MS SQL Server, Stored
Procedures ORM & Data Access	: Entity Framework Core (Code First, Database First), LINQ
Cloud Azure (Basics)	: Azure (Basics), Azure App Services, Azure Storage, Azure SQL Database
State Management	: NgRx, RxJS, BehaviorSubject, ReplaySubject
AI Tools	: Claude AI, ChatGPT, Cursor AI, GitHub Copilot, Google
Performance Optimization	: Lazy Loading, OnPush Change Detection, VirtualScrolling
Testing Frameworks	: Jasmine, Karma
API Integration	: RESTful APIs, API Integration, JSON Data Handling
Security	: JWT, OAuth2(Basics), CORS
Code Management	: GIT, GitHub, GitLab, Bitbucket
Development Tools	: Figma, VS Code, Visual Studio, SSMS, Postman,
Swagger Collaboration	: Agile, Scrum, JIRA, Code Reviews, Documentation

Experience Details

Software Engineer – Capgemini
05/2023 – Present, Full-Time
Achievements/Tasks

- ✓ Led frontend module development using Angular 17, improving UI responsiveness and maintainability.
- ✓ Built and integrated .NET Core APIs to support key business workflows.
- ✓ Improved application performance by 25% through lazy loading and code refactoring.

EducationalQualifications

Bachelor of Technology (B.Tech) – Computer Science and Engineering
GATES Institute of Technology, Gooty, Andhra Pradesh

Achievements

- ✓ Completed 20+ **course certifications** on **LinkedIn Learning**.
- ✓ Completed 10+ **course certifications** on **Udemy**.
- ✓ **Earned 5★** rating in **Python** on HackerRank.
- ✓ **Earned 5★** rating in **SQL** on HackerRank.

Professional Experience

Project 1:

Project	: Inventory Management System (IMS)
Role	: Software Developer (Angular / .Net Core)
Environment	: Angular, .Net Core, TypeScript, C#, HTML, Scss, RxJs, MSSQL

Description:

An Inventory Management System streamlines tracking and management of stock levels, purchases, and sales. It integrates modules for inventory, quotes, purchase orders, and sales orders while ensuring seamless packaging, shipment tickets, and credit memos. This system enhances operational efficiency by providing real-time stock visibility, optimizing procurement, and ensuring smooth order fulfillment and shipment tracking.

Responsibilities:

- ✓ Developed dynamic UI components using Angular, TypeScript, HTML, and SCSS.
- ✓ Integrated RESTful APIs for seamless data flow between frontend and backend.
- ✓ Created responsive layouts ensuring cross-browser compatibility and performance.
- ✓ Collaborated with backend developers for API design and troubleshooting.
- ✓ Conducted code reviews and optimized performance.
- ✓ Managed version control using Git for smooth deployment.
- ✓ Debugged and resolved UI issues to enhance user experience.

Project 2:

Project	: Enterprise resource planning (ERP)
Role	: Software Engineer (Angular / .Net Core)
Environment	: Angular, .Net Core, TypeScript, C#, HTML, Scss, RxJs, MSSQL

Description:

Enterprise Resource Planning (ERP) integrates core business processes, streamlining operations across departments. It unifies modules for inventory, purchases, sales, and production, ensuring efficient resource management. The system also includes CRM for customer relations, HRD for human resource management, quality control (QC) for maintaining standards, and comprehensive admin and accounts functionalities. This holistic approach enhances productivity and decision-making.

Responsibilities:

- ✓ Developed interactive dashboards for **sales**, **CRM**, and **accounts** modules using Angular.
- ✓ Developed RESTful APIs and services using .NET Core for ERP functionalities.
- ✓ Created MSSQL queries for managing **inventory** and **purchase** data efficiently.
- ✓ Integrated **automated workflows** for seamless operations between departments.
- ✓ Ensured data consistency across modules using **RxJS** for real-time synchronization.
- ✓ Conducted **unit testing** to maintain code quality and reliability.
